Dear Hiring Manager,

I am writing to express my strong interest in the Web Development Internship position with the Analytics team at Suitsupply. As a longtime admirer of Suitsupply's commitment to fine tailoring at a reasonable price point, this is my dream job. As a Computer Science student at Montgomery College with complementary studies in Data Science, I am uniquely positioned to bridge the gap between technical web development and effective data presentation.

My academic background aligns perfectly with this role's requirements. Through my Computer Science coursework, I have developed proficiency in modern web technologies including HTML/CSS and React, while my concurrent Data Science studies have given me hands-on experience with data visualization techniques and statistical methods. This dual expertise allows me to not only build functional web applications but also design data visualizations with a deep understanding of and great attention to the relevant data and analytics. My work as a Student Assistant has given me real experience in building towards a goal, whether that was in 3D design or guiding a student towards a certification.

Beyond technical capabilities, my leadership experience demonstrates my ability to manage projects and communicate effectively with diverse stakeholders. As President of Raptors Who Code and Chair of the ACM Student Chapter at Montgomery College, I successfully led partnerships that doubled active membership while managing multiple club projects simultaneously. My contributions to CodeTriage, where I handled over 100 GitHub issues, showcase my problem-solving abilities and experience collaborating on technical projects.

My bilingual capabilities in French and strong written communication skills would be particularly valuable when working with diverse teams or international data sources. I have had the opportunity to use these skills as a code base translator for Reactive Resume, and I could extend these skills to Suitsupply, an international brand at its core. I am excited about the opportunity to support Suitsupply by using my skills and experience to turn data and analytics into contextualized visualizations.

Thank you for considering my application. I look forward to discussing what I can offer to Suitsupply.

Sincerely,

Michael Desir
